

Construction Site Security

Construction sites and properties under refurbishment are particularly vulnerable to unlawful intrusion, whether it is to squat, vandalise or steal tools and materials.

The consequential costs can be considerable, both in terms of delays to the project and financial loss to the scheme promoter/contractor.

inView CCTV Tower

Our high-spec CCTV towers can be deployed to most environments, whether or not mains power or internet access are available.

The tower unit provides independent multi-point alarm coverage of large areas and is viewable and controllable remotely.

inView Mobile CCTV unit

Our unique, rapid deployment, highly visible mobile CCTV unit can be operational and live within minutes of arrival on site.

With on-board power and wireless communications the unit is totally self-sufficient.

The vehicle is equipped with a pan-tilt-zoom camera mounted on a 6m telescopic mast plus multiple fixed cameras, all with night vision capability.

Manned Guarding

Guard personnel, with or without a dog, enables the physical presence of security to act as a powerful deterrent against unwanted intruders, whilst allowing easy access for authorised personnel.

inView HD CCTV

Our HD video platform can be monitored remotely and video footage can be recorded, stored and recalled by the client if needed for evidence or training.

Monitored Alarms

Our unique Solo Alarm system works independently of power or telephone lines.

The alarm can be fitted, commissioned, verified and working to protect your property within twenty minutes.

Monitoring & Response

Our CCTV monitoring service is NSI Gold approved and can provide 24/7 coverage of alarms and CCTV services. Our security teams can provide a same-day nationwide response service following confirmed alarm activations.

Steel Security Doors

Clearway's temporary steel doors replace existing doors to prevent illegal entry whilst allowing access for authorised personnel.

The doors can be installed quickly and cause no damage to the existing frame.

Keyless Entry

Our keyless door is the only security door in its class to be both Police and Insurance approved.

No keys, no hassle; our keyless steel door allows access through unique multi-digit codes.

Steel Security Screens

Pre-fabricated (folded), high security, heavyweight steel screens are designed to cover existing windows and openings. Where folded steel screens are not suitable, we will use perforated steel sheet, hand-cut on-site to fit difficult shapes or openings.

Concrete Barriers

Timber Hoarding

Heras Fencing

inView Video Verified

Wireless & power-independent, interior and exterior video alarm system with day and night visibility cameras, providing 24-hour security.

When activated, the system sends a video clip to an alarm operator who will verify if a response is needed.

Scaffold Alarms

Mitigate the risk of site intrusion with a Video Verified scaffold alarm to protect the property in development.

Property Inspections

Regular site inspections allow us to quickly identify and report all potential risks likely to arise with a vacant building.

Property inspections include comprehensive checks and photographic evidence that enable the client to be made aware of any situation that requires immediate action.
